## 1 Introduction

### 1.1 The kautitle package

The kautitle package defines an alternative title page using the logo of Karlstad University. Note that this is not an implementation of the Karlstad University

---

\*This document corresponds to kautools v1.8, dated 2013/04/18.

Studies title page, i.e., this alternative title page won't be used for your thesis. The logo is available from

<http://www.kau.se/sites/default/files/image/press/kau-logo-tryck.pdf>

and must be available in L<sup>A</sup>T<sub>E</sub>X's search path before using this package.

At the moment, this package uses a manually installed font called **aun** and it's bold version **aub**. It might not be available on your system, though, and since the font is licensed, I may not distribute it. If you do not possess the font, you have to switch to another one.

Load the package without options. The title page can be created using `\maketitle`. Note that the previous definition of `\maketitle` is not destroyed, but preserved in the macro `\kut@maketitle`. You can use it in your document as follows:

```
\makeatletter
\kut@maketitle
\makeatother
```

Two fonts are used on the title page and can be changed using the macro `\setkautitlefont` `\setkautitlefont{<font>}`. The argument `<font>` accepts key-value pairs where keys are **normalfont** and **titlefont** and values are any sequence of L<sup>A</sup>T<sub>E</sub>X's font commands. For switching to your standard sans-serif font, you should add these lines to your preamble:

```
\setkautitle%
{ normalfont=\sffamily\LARGE
, titlefont=\sffamily\bfseries\Huge }
```

## 1.2 The **kaumeta** package

The **kaumeta** package defines three macros, `\subject`, `\institute`, and `\place`, for providing additional meta data about the document and it's author. This meta data can be used, e.g., on the title page of the document.

## 1.3 The **kaulist** package

The **kaulist** package defines pretty printing macros for lists. For instance, a list "1,2,3" is transformed to "1, 2, and 3".

## 1.4 The **kauclear** package

This package replaces the macro `\cleardoublepage`. Empty pages with odd page numbers will not print the page number. Also, the macro `\pagestyle` is redefined. The new behaviour is to stores the page style for being able to restore it later on.

## 1.5 The **kauenvironments** package

This package defines the environments `researchquestions` and `contributions`.

## 1.6 The `kauparts` package

This package defines a new `\part` macro, `\kaupart`. It is independent of `\part`, but you should decide yourself for one alternative only. The `\kaupart` macro adds a cover page for the new part.

Use the package options `vshift` and `vstep` to adjust the placement of the thumb indices on the cover pages.

`\kaupart` Use `\kaupart[<meta>]{<title>}` to create a numbered part with the given *<title>*. You may use the optional argument *<arg>* for adding meta data. This includes `body` for typing additional material on the cover page and `label` for creating a label such as usually created by `\label`. In addition, the switch `tocentry` may be set to false, if the macro should not add an entry to the table of contents.

`\kaupart*` The starred version of `\kaupart` works exactly like the unstarred version, but creates an unnumbered part.

## 1.7 The `kaupaper` package

*Yet no description.*

## 1.8 The `kaustudies` package

This package sets the page dimensions so that your document does not need to be scaled for printing. It also chooses Garamond as the standard font.

You can use the package option `tinyfontswitch=false` in order to avoid the switch to sans-serif fonts when using `\tiny`. The switch is recommended by Karlstad University Studies, though, it is rather debatable whether this is necessary when using L<sup>A</sup>T<sub>E</sub>X and the correct page dimensions.

## 1.9 The `pgfcropmarks` package

The package `pgfcropmarks` draws crop marks on A4 paper. This is supposed to be the last step after creating all tables, indices, and glossaries. When the package is loaded, L<sup>A</sup>T<sub>E</sub>X will not create or update any auxiliary files.

# 2 Implementation

## 2.1 The `kautitle` package

No package options are accepted.

```
1 <*title>
2 \ProcessOptions\relax
```

Load dependencies.

```
3 \RequirePackage{xkeyval}
4 \RequirePackage{tikz}
5 \RequirePackage{hyphenat}
6 \RequirePackage{kaumeta}
```

`\setkautitlefont` The macro `\setkautitlefont` allows to choose another than the default font for the title page. The title page has only two different font settings, `titlefont` which is used for the title text and `normalfont` which is used otherwise.

```

7 \define@cmdkeys[kut]{pkg}[kut@]{normalfont,titlefont}
8 \setkeys[kut]{pkg}%

## 2.2 The kaumeta package

No package options are parsed.

```

55 \*meta
56 \ProcessOptions\relax

```

Dependencies are loaded.

```

57 \usepackage{ifthen}

```

**\subject** The macro `\subject{<subject>}` can be used to set the subject of the document.

**\@subject** The last `<subject>` set will be available in the macro `\@subject`.

```

58 \newcommand*\@subject{}
59 \newcommand\subject[1]{\renewcommand*\@subject{#1}}

```

**\institute** The macro `\institute[<short>]{<institute>}` can be used to set the institute of the document's author. It is possible to provide a shorter version of the institute in the optional argument `<short>`. If not explicitly set, the short version is the same as the long version `<institute>`. The values are available in the macros `\@institute` and `\@shortinstitute`.

```

60 \newcommand*\@institute{}
61 \newcommand*\@shortinstitute{}
62 \newcommand\institute[2][{}]{%
63 \renewcommand*\@institute{#2}%

67 \renewcommand*\@shortinstitute{#1}%
68 }%
69 }

```

**\place** The macro `\place{<place>}` can be used to set the place of the document's author.

**\@place** The last `<place>` set will be available in the macro `\@place`.

```

70 \newcommand*\@place{}
71 \newcommand\place[1]{\renewcommand*\@place{#1}}

```

**\supervisor** `{<name>}` sets the supervisor's name for the kaumasters class.

```

72 \newcommand*\@supervisor{}
73 \newcommand\supervisor[1]{\renewcommand*\@supervisor{#1}}

```

`\examiner` `{⟨name⟩}` sets the examiner’s name for the kaumasters class.

```

74 \newcommand\@examiner{}
75 \newcommand\examiner[1]{\renewcommand*\@examiner{#1}}
76 \meta

```

## 2.3 The kaulist package

No options are parsed.

```

77 ⟨*list⟩
78 \ProcessOptions\relax

```

For `\prettylist`, the packages `pgffor`, `pgfmth`, and `pgfkeys` are required.

```

79 \RequirePackage{tikz}

```

`\commasign` defines a comma (“,”), if one is to be used before “and”.

```

80 \AtBeginDocument{%

86   \@ifpackageloaded{babel}
87     {\newcommand*\andname{\iflanguage{swedish}{och}{and}}}%
88     {\newcommand*\andname{and}}%
89 }

```

`\prettylist` `{⟨list⟩}` transforms a comma separated list into a list in natural language.

```

90 \newcommand\prettylist[1]{%

```

The number of list elements is stored in `\num`.

```

## 2.4 The kauclear package

No options are parsed.

```

110 \clear
111 \ProcessOptions\relax

```

`\kuc@currentpagestyle` The page style is stored in `\kuc@currentpagestyle`. Default: `plain`

```

112 \newcommand\kuc@currentpagestyle{plain}

`\pagestyle` The macro `\pagestyle` is redefined to update the page style in `\kuc@currentpagestyle`.

```

113 \let\pagestyle@orig\pagestyle
114 \renewcommand\pagestyle[1]{%
115   \renewcommand\kuc@currentpagestyle{#1}%
116   \pagestyle@orig{#1}%
117 }

```

`\kuc@restorepagestyle` The page style can be restored with `\kuc@restorepagestyle` after (temporarily) switching to another one using `\pagestyle@orig`.

```

118 \newcommand\kuc@restorepagestyle{%
119   \pagestyle@orig{\kuc@currentpagestyle}%
120 }

```

`\cleardoubpage@orig` The previous definition of `\cleardoublepage` is preserved in `\cleardoublepage@orig`.

```

121 \let\cleardoubpage@orig\cleardoublepage

```

`\cleardoublepage` The macro `\cleardoublepage` is redefined. The new definition switches temporarily to the page style `empty`.

```

122 \renewcommand\cleardoublepage{%
